Phyllostachys bambusoides ‘Castillonis’

Origin: China

CHARACTERISTICS: As its name indicates, this bamboo is the inverse of P. b. ‘Castillonis’ by having green culms with regular yellow stripping. It is taller and bigger.

Hardiness: -18°C
Light: Full sun
Size: 12 to 15 m - Category: Giants
Ø of culms: 80 mm

Propagation: Rhizome cutting or clump division.

Needs: Adapts well to all situations with a preference for moist and healthy soils.

Uses: Solitary clump, grove, hedge. Suitable for pots or jardinières.

Maintenance: For pots, provide a healthy and well-drained soil and fertilize twice a year.

Legend:

RUNNING
EXPOSURE FULL SUN
MEDIUM LEAF
WIND BREAK OR GREEN SCREEN
GROWS WELL IN POT
GROWS IN POT OR VERANDA
